1 Tucson Electric Power Company and UNS Electric, Inc. ("Companies"), through
2 undersigned counsel, respectfully submits their Reply Brief in this matter.

3 **I. INTRODUCTION.**

4 The Companies maintain their position as stated in their Initial Post-Hearing Brief. The
5 record supports: (1) adopting Track and Monitor at the end of this proceeding as the best short-
6 term solution; and (2) reopening the Renewable Energy Standard and Tariff Rules ("REST
7 Rules") for the express purpose of removing the annual Distributed Renewable Energy
8 Requirement ("DE requirement") under A.A.C. R14-2-1805.

9 Staff's Track and Monitor proposal is the best solution in short-term – as it best fits within
10 the framework of the REST Rules. The concerns expressed by other parties with the Track and
11 Monitor proposal are unfounded. As set forth below (and in the Companies' Initial Post-Hearing
12 Brief), Track and Monitor does not result in double counting of Renewable Energy Credits
13 ("RECs") as defined by the REST Rules. Opponents continue to misinterpret how Track and
14 Monitor will operate. Moreover, the evidence clearly demonstrates that: (1) customer choice and
15 not utility incentives drive the market for distributed renewable energy ("DE"); and (2) a growing
16 vibrant voluntary DE market exists in Arizona. Thus, because there remains little reason to
17 maintain the DE requirement, the Arizona Corporation Commission ("Commission") should
18 reopen the REST Rules to eliminate it.

19 **II. RESPONSE TO PARTIES' INITIAL BRIEFS.**

20 **1. Response to Staff.**

21 *A. The Companies support Staff's argument regarding Track and Monitor*
22 *as the superior solution to approve of in this proceeding.*

23 The Companies continue to support Track and Monitor as the best short-term solution
24 when incentives are no longer necessary. The Companies agree with Staff that the issue in this
25 case is narrow and the time to resolve it is now. As the Companies explained extensively in their
26 brief – Track and Monitor works by adjusting the REST requirement for each utility on a kWh-
27 per-kWh basis for energy produced by distributed renewable generation where no RECs are

1 transferred. Track and Monitor meets all five of Staff's policy goals.

2 Further, because the utilities would not claim any RECs or "renewable attributes" not
3 transferred to them to meet the DE requirement, no double-counting concerns exist.¹ Staff is
4 correct that the RECs not transferred would remain with the owner and utilities would not use
5 those RECs (or the associated kWhs) for compliance.² The criticisms of Track and Monitor from
6 the Center for Resource Solution ("CRS") is unfounded in part because CRS presides over a
7 voluntary market, and not any compliance market like in Arizona.³ Still, Staff and the utilities will
8 be able to track actual kWh production from DE facilities, and have quantitative data on the
9 amount of DE generated in their respective service territories. Also, the Companies agree with
10 Staff that Track and Monitor should lower costs to ratepayers.

11 Moreover, the Companies support Staff's "backup" Track and Monitor proposal should the
12 Commission continue to have concerns regarding double-counting. Staff's modification would
13 waive the full DE requirement on a year-to-year basis. As the Companies stated in their Initial
14 Post-Hearing Brief, any full waiver of the DE requirement will resolve concerns regarding double
15 counting.⁴ Staff's criticisms of other parties' proposals are sound, and the Companies join Staff in
16 those criticisms.

17 Finally, the Companies understand Staff's reticence regarding permanently eliminating the
18 DE requirement from the REST Rules. But the Companies believe that eliminating the DE
19 requirement meets the remaining four policy goals. Further, utility incentives are no longer the
20 driving force for DE and a growing, strong voluntary DE market already exists.⁵ Finally, the
21 evidence shows having a separate "DE carveout" will continue to be more costly to ratepayers as
22 DE continues to be more expensive than utility-scale generation.⁶ The Companies support Track
23 and Monitor as the solution the Commission should approve now; but the Commission should find

24 _____
25 ¹ See Companies Initial Post-Hearing Brief at 9-13 for their extensive discussion of why Track and Monitor
does not double count.

26 ² See Staff's Opening Brief (August 27, 2013) at 8.

27 ³ Companies Initial Post-Hearing Brief at 13.

⁴ Companies Initial Post-Hearing Brief at 8.

⁵ The Companies discuss these reasons in depth in their Initial Post-Hearing Brief at 26-29.

⁶ Tr. (Tilghman) at 265.

1 a permanent solution by also ordering the REST Rules be reopened and eliminating the DE
2 requirement.

3 **2. Response to Arizona Public Service Company ("APS").**

4 **A. *The Companies agree that CRS's statements and potential actions should***
5 ***not dictate what is best for ratepayers in Arizona.***

6 The Companies share APS's concern about a California non-profit dictating Arizona
7 policy. The Companies also agree that the wait and see approach solves nothing; especially since
8 the disappearing cash incentives issue is facing the Commission now.⁷ The Companies join APS
9 in its criticisms of RUCO's Baseline proposal, as well as the Vote Solar Initiative ("VSI")
10 standard-offer proposal and the Western Resource Advocates ("WRA") reverse auction proposal.

11 **3. Response to Federal Executive Agencies and Department of Defense ("DoD").**

12 **A. *Track and Monitor would preserve the significant DoD DE facilities'***
13 ***investments in Arizona.***

14 The Companies understand DoD's need to preserve the integrity of its RECs, and does not
15 take issue with its need – or the needs of both the Department of Veteran Affairs and the U.S.
16 Army's Energy Initiatives Task Force – to comply with the Energy Policy Act of 2005 or
17 Executive Order 13423. The Companies also recognize the contributions DoD agencies have
18 made in Arizona. Indeed, neither TEP nor UNS Electric wants to take any action to jeopardize
19 DoD projects in Arizona. All that stated, and as the Companies have explained, Track and
20 Monitor does not allow the utilities to claim RECs without actually acquiring those RECs.

21 The Companies further agree that the wording must be carefully crafted to ensure utilities
22 do not claim "renewable attributes" they have not acquired.⁸ Further, the intent is to apply Track
23 and Monitor prospectively when cash incentives are not necessary to drive the DE market.

25 ⁷ Companies Initial Post-Hearing Brief at 18-19, noting that both TEP and UNS Electric proposed options
26 with no DE incentives in their respective 2014 REST Plans (see FN 77).

27 ⁸ The Companies Initial Post-Hearing Brief explains why Track and Monitor is not double-counting RECs
on pages 9-13. In particular, the Companies indicate that the wording could resolve any confusion such as
Mr. Huber's suggestion that the wording could be something like "1,000 kWh hosted on [a utility's] grid
that [it] does not own the attributes to." See Rebuttal Testimony of Lon Huber at 4.

1 Renewable energy would *not* be used to meet Arizona's DE requirement and the utility would not
2 be claiming the renewable attributes from DE absent acquiring the RECs.⁹ Thus, Track and
3 Monitor, by design, would not allow any claims on RECs or "renewable attributes" not acquired.

4 **4. Response to RUCO.**

5 **A. *The "Baseline" proposal is vague and ambiguous – as the evidence***
6 ***demonstrates.***

7 The Companies maintain that RUCO's "Baseline" proposal is fraught with problems, as
8 detailed in their Initial Post-Hearing Brief.¹⁰ By not recommending a specific threshold, RUCO's
9 approach would lead to more technical conferences, more workshops and likely more hearings to
10 attempt to determine an appropriate threshold. Further, RUCO's proposal does not provide for a
11 direct link between renewable energy deployed in Arizona and compliance with the REST Rules.
12 It is difficult to see how the "Baseline" proposal can fit neatly into utilities' implementation plan
13 timelines when even RUCO provides little detail on how to establish the threshold, for example.
14 Compared to Track and Monitor, the "Baseline" proposal is more complicated, will take more
15 time to implement, and provides significantly less certainty.¹¹

16 **B. *Adopting Track and Monitor would not be an unlawful taking of any***
17 ***property right, assuming one exists.***

18 While not the only party to do so, RUCO apparently assumes that there is some inherent
19 property right in what is essentially an accounting mechanism. The Companies do not agree with
20 this assumption – and know of no case law that has bequeathed a "property right" to the type of
21 REC defined by the REST Rules. Moreover, the Commission did not make any finding in
22 Decision No. 67127 (November 14, 2006), which approved the REST Rules, to confer a property
23 right in the RECs. But even if a property right were to exist in such a REC, Track and Monitor (or
24

25 ⁹ Responding to DoD's Brief at 4 citing the Renewable Energy Requirement Guidance for EPAct 2005 and
26 Executive Order 13423 of what is double-counting (admitted as DoD/FEA Ex. 4 during the hearings).

27 ¹⁰ RUCO all but abandons its "50/50 proposal" so the Companies will not address it specifically here. Even
so, the Companies remain opposed to that proposal as well.

¹¹ See the Companies Initial Post-Hearing Brief at 21-22 for their more extensive criticism of the RUCO
"Baseline" proposal.

1 any other solution) does not result in an unlawful taking of private property. RUCO cites to
2 *Scheehle v. Justices of Supreme Court of Arizona* as support for its argument; but RUCO appears
3 to doubt its own argument, acknowledging that its argument “would be difficult to make and
4 subject to different interpretations.”¹² Indeed, the U.S. Supreme Court has stated that a mere
5 diminution in value without more is not a taking.¹³ The Commission is not unlawfully impeding
6 any property rights by adopting Track and Monitor when advancing the legitimate state interest of
7 achieving renewable energy goals through the most cost-effective means – and disagree with any
8 implication by RUCO to the contrary.

9 **C. RUCO misinterprets Track and Monitor.**

10 Finally, RUCO states that Track and Monitor “explicitly counts kWhs toward compliance
11 and explicitly lowers the REST by the exact amount of counted kWhs.”¹⁴ This is inaccurate.
12 Track and Monitor does not permit a utility to count kWhs toward compliance absent acquiring
13 the RECs. Rather, Track and Monitor reduces the compliance target by the amount of kWhs
14 generated from renewable resources where the utility did not acquire the RECs – as Staff stated on
15 several occasions.¹⁵

16 **5. Response to Western Resource Advocates and Vote Solar Initiative.**

17 **A. The Commission should not adopt either a standard offer or reverse**
18 **auction process as both are costly and complicated.**

19 The Companies maintain that neither VSI’s standard offer proposal nor WRA’s reverse
20 auction proposal should be adopted – because both are too costly and create an artificial market
21 that require ratepayer funds to drive compliance.¹⁶ WRA and VSI argue that acquiring RECs
22

23 ¹² See RUCO’s Closing Brief at 9.

24 ¹³ The Companies cited *Lucas v. South Carolina Coastal Council* in its Initial Post-Hearing Brief as support
25 for this point. But see also *Penn. Cent. Transp. Co.* 438 U.S. 104, 124 quoting *Pennsylvania Coal Co. v.*
26 *Mahan*, 260 U.S. 393 413 (1922) (“Government hardly could go on if to some extent values incident to
property could not be diminished without paying for every such change in the general law”) and 130-31
(stating that the focus should be on the character of the government action as well as the nature and extent
of the interference to the whole.)

27 ¹⁴ See RUCO’s Closing Brief at 7.

¹⁵ See e.g. Robert Gray Direct Testimony at 7-8.

¹⁶ See Companies Initial Post-Hearing Brief at 23-24.

1 would be a small expense for utilities.¹⁷ But no matter the magnitude of the expense, customers
2 should not have to pay any more than necessary for a DE market where customer choice is the
3 primary driver independent of any incentives offered.¹⁸ Again, Mr. Berry for WRA as well as Mr.
4 Huber for RUCO testified that customers are pursuing DE for reasons other than utilities offering
5 incentives.¹⁹ Thus, expending time and resources to put together a reverse auction or standard
6 offer process is unnecessary.

7 Further, even WRA and VSI concede that developing the specifics of an auction would
8 require yet another “collaborative process” as well as an annual review of budgets – possibly
9 involving additional technical conferences.²⁰ Further, VSI’s standard offer would involve a
10 separate process every three months and dusting off a seven-year old draft report (the 2006 UCPP
11 report). So neither a reverse auction nor a standard offer is as simple or as harmonious with the
12 REST Rules as WRA and VSI would have the Commission believe.

13 ***B. CRS should not have the last word as to renewable energy policy in***
14 ***Arizona.***

15 Both WRA and VSI appear to believe that CRS’s standard should dictate the
16 Commission’s REST Rules compliance policies because it addresses the double counting issue.
17 However, as stated numerous times, Track and Monitor would not double-count RECs. Also,
18 Track and Monitor would not transfer RECs to the utilities in violation of A.A.C. R14-2-1803.
19 Staff’s witness Robert Gray testified that the RECs remain with the system owner under Track and
20 Monitor if not sold by the system owner.²¹ Further, if CRS refuses to certify RECs because of
21 Track and Monitor, then it is CRS that is directly depriving system owners of value. CRS should
22 not dictate the Commission’s determination as to the most cost-effective means to advance
23 renewable energy goals in Arizona.

24
25 ¹⁷ See VSI / WRA Opening Brief at 5.

26 ¹⁸ See Tr. (Tilghman) at 211, 276-77; Tr. (Bernovsky) at 76.

27 ¹⁹ Tr. (Berry) at 461; Tr. (Huber) at 592.

²⁰ VSI / WRA Opening Brief at 12-13.

²¹ See Robert Gray Direct Testimony at 7-8. The Solar Electric Industries Association (“SEIA”) also makes the same argument as WRA and VSI.

1 **C. *Track and Monitor does not impede any so-called property rights in the***
2 ***RECs.***

3 WRA and VSI also misrepresent what RECs actually are. They are merely an accounting
4 mechanism. They are not equivalent to development rights on parcels of land. They are a creation
5 solely of regulation. Therefore, adopting Track and Monitor would not constitute an unlawful
6 taking of any private property right.

6 **6. Response to Solar Industries Electric Association (SEIA).**

7 **A. *Simply waiting until the issue becomes a problem is not a solution.***

8 SEIA would have the Commission do nothing at this time (except perhaps grant a one-year
9 waiver). SEIA's recommendation to simply wait is inappropriate. APS and the Companies have
10 met many of the annual DE requirements for several years;²² so there is no reason why they should
11 continue to use ratepayer funds for incentives. Yet SEIA wants utilities like APS and the
12 Companies to simply charge ratepayers so that incentives can continue to be offered.

13 The Companies actually agree with SEIA that the DE requirement was a success. The "DE
14 carveout" has done its job. But as incentives disappear and as utilities are far less involved in
15 customers' decision-making to pursue DE, the utilities should not be bound to meet a requirement
16 it has little control over. Mr. Tilghman, testifying for the Companies, cited to specific instances
17 where customers are opting *not* to take incentives, which corroborated Mr. Bernovsky's
18 statements regarding incentives not being the main market driver.²³

19 **B. *The Commission should not defer to CRS as SEIA implies.***

20 Further, SEIA implies that the Commission should defer its judgment to that of CRS
21 because apparently "Arizona's solar market functions as part of a broader national and
22 international market where RECs are bought and sold."²⁴ The Companies do not concede to this
23 characterization of Arizona's solar market; even so, the Commission's role is not to buttress value
24 in RECs for a voluntary market at the expense of ratepayers. Further, CRS's concerns are

25
26 ²² APS is in compliance with its residential DE requirement through 2016 and its commercial DE
27 requirement through 2020. See Tr. (Bernovsky) at 101, 103, 138. TEP is in compliance for the next six
years with its commercial DE requirement. Tr. (Tilghman) at 225-26.

²³ See Tr. (Tilghman) at 181.

²⁴ See SEIA's Post Hearing Brief at 10.

1 addressed if the language is clear about when utilities can claim RECs or “renewable attributes”
2 toward compliance with a renewable energy standard, and when they cannot.²⁵ Staff has explicitly
3 indicated what can be claimed under Track and Monitor (*i.e.*, only RECs acquired by the utility).

4 **C. SEIA mischaracterizes Track and Monitor**

5 Finally, SEIA mischaracterizes Staff’s Track and Monitor by stating that Staff’s proposal
6 would use energy for compliance purposes.²⁶ SEIA is incorrect. Track and Monitor does not force
7 DE system owners to give up their RECs absent a transfer. It also does not allow utilities to use
8 kWhs to meet compliance absent the associated “REC” as defined in the REST Rules. Further,
9 assertions that the RECs or the “renewable attributes” become “virtually worthless” if Track and
10 Monitor is adopted are unsupported.

11 **7. Response to NRG Solar LLC.**

12 **A. Track and Monitor can and should be adopted in this proceeding; further,**
13 **CRS should not have “the last word” on renewable energy policy in**
14 **Arizona.**

15 The Companies disagree with NRG Solar that Track and Monitor double counts – for all of
16 the reasons previously stated. The Companies also do not agree that RECs have some inherent
17 economic value as NRG Solar contends.²⁷ For example, APS testified that the book value of
18 RECs generated from DE resources is zero.²⁸ Further, the Companies disagree that CRS
19 “unequivocally believed” that Track and Monitor double counts, for CRS’s Executive Director
20 testified she was not 100% sure what Staff’s proposal actually was.²⁹ But NRG Solar, like SEIA,
21 wants the Commission to defer to CRS as having “the last word” on the double-counting issue (for
22 commercial DE at least).³⁰ The Companies disagree that this is, or even should be, the case.

23
24
25 ²⁵ See Tr. (Martin) at 860.

26 ²⁶ See SEIA’s Post-Hearing Brief at 13.

27 ²⁷ See NRG Solar’s Initial Brief at 4.

28 ²⁸ Tr. (Bernovsky) at 161.

29 ²⁹ Tr. (Martin) at 822.

30 ³⁰ NRG Solar’s Initial Brief at 9.

1 In fact, now is the time for CRS to examine compliance markets in Arizona and adopt their
2 guidelines accordingly and to acknowledge the presence of such markets.³¹ Even so, a full waiver
3 of the DE requirement, decided on a year-to-year basis, that is permanent for that year, would be
4 acceptable to the Companies (as a temporary measure pending reopening of the REST Rules and
5 eliminating the DE requirement.)³²

6 **8. Response to Kevin Koch's Opening Brief.**

7 It does not appear Mr. Koch takes a strong position on any of the proposals except that he
8 opposes reopening the REST Rules. The Companies response to Mr. Koch's opposition is that
9 just because a rulemaking may be long and arduous does not mean justification does not exist for
10 undertaking such a process – if in the public interest to do so. The Companies have stated their
11 case why the Commission should reopen the REST Rules and eliminate the DE requirement and
12 rest on their arguments previously stated.

13 **9. Response to Wal-Mart Stores Inc., and Sam West, Inc. ("Wal-Mart").**

14 Wal-Mart also appears to oppose Track and Monitor – although their witness appeared to
15 indicate during the hearing that Staff's proposal had some merit.³³ The Companies have stated
16 their case in support of Track and Monitor numerous times and will not repeat it again here. Wal-
17 Mart also opposes removing the DE requirement because the Commission then cannot react to
18 changing market conditions.³⁴ In response, just because the DE requirement is eliminated does
19 not mean the Commission could not take other actions to spur DE development should such
20 changes occur. The Commission has options available to encourage DE regardless of the existence
21 of any specific "DE carveout" should DE market activity become insufficient.

22
23
24

³¹ As indicated in the Companies' Initial Post-Hearing Brief at 15, CRS has not updated its guidelines to
25 reflect Arizona's REST Rules.

26 ³² The Companies discuss this option in some detail at 25-26 of their Initial Post-Hearing Brief. The
27 Companies also find Staff's modification to Track and Monitor, where a full waiver would be permanently
granted on a year-by-year basis, acceptable. See Companies Initial Post-Hearing Brief at 8.

³³ Compare Tr. (Baker) at 371-72 to Wal-Mart Initial Closing Brief at 4.

³⁴ Wal-Mart Initial Closing Brief at 3.

1 **III. CONCLUSION.**

2 The Companies request that the Commission: (1) approve Staff's Track and Monitor
3 proposal in this proceeding; and (2) reopen the REST Rules for the express purpose of removing
4 the DE requirement set forth in A.A.C. R14-2-1805.
